FOR IMMEDIATE RELEASE

TOC Opens State-of-the-Art Imaging Suite, Enhancing Precision in Orthopedic Care

Tallahassee, FL – July 15, 2025 – TALLAHASSEE, FL Tallahassee Orthopedic Clinic (TOC) is proud to announce the completion of its state-of-the-art Advanced Imaging Suite, a major investment in diagnostic precision and patient centered orthopedic care. This cutting-edge facility now features the GE SIGNA Voyager 1.5T wide bore MRI and the GE SIGNA Pioneer 3.0T MRI systems, offering powerful imaging capabilities under one roof.

The new suite enhances TOC's ability to deliver fast, accurate, and comfortable imaging specifically designed to support the diagnosis and treatment of orthopedic and musculoskeletal conditions including injuries and disorders affecting bones, joints, ligaments, tendons, muscles, and the spine.

"At TOC, we are committed to leading the region in orthopedic care, and this advanced imaging suite is an extension of that mission," said TOC CEO Kelby Tardi. "We've created a space that houses the most advanced imaging technology available while also prioritizing patient comfort and accessibility at every step."

Both MRI systems are equipped with the latest coil designs and software innovations, enabling TOC providers to capture detailed, high-resolution images quickly and efficiently. This level of diagnostic clarity is essential when evaluating sports injuries, joint damage, spine disorders, and other orthopedic concerns that require precise imaging for effective treatment planning.

Dr. Hector Mejia, Managing Partner at TOC, added, "This imaging suite strengthens every part of the orthopedic care process from diagnosis to recovery. The improved image quality helps our specialists identify even the most subtle injuries, while the patient friendly design of the suite reduces anxiety and improves the overall care experience."

The wide bore MRI technology offers a more spacious experience for patients, especially for those who suffer from anxiety, mobility issues or larger body sizes. With shorter scan times and noise reduction technology, the experience is quieter, faster and significantly less stressful – making MRI scans more accessible for patients who may have previously avoided it. The suite's thoughtful design also supports a more streamlined clinical workflow, enabling faster turnaround for results and treatment decisions.

With the completion of the Advanced Imaging Suite, TOC continues to raise the standard for orthopedic care across North Florida and South Georgia, offering innovation, comfort, and clarity when it matters most.
